

FEARLESS

Some will say it's all about the journey, others will say it's the destination. Whatever it is you're chasing, do it fearlessly. Step outside of your comfort zone and confront the unknown, whether it's over that next ridgeline, on the race track, or across a trail. Fearlessly pursue a life worth living and never look back.

A snowboarder in a dark jacket and light pants is captured mid-air, performing a jump on a snowy slope. The snowboarder is positioned in the upper left quadrant of the frame, with a large plume of snow trailing behind them. The background is a clear, bright blue sky with some light, wispy clouds. The overall scene is dynamic and energetic, set in a winter sports environment.

PURSUIT

FORMULA HELMETS

Opt for the absolute in total head protection with FLY Racing's Formula helmet. Its Adaptive Impact System (AIS) whose high-performance ecosystem of structural designs and energy mitigating materials — including RHEON, a leading-edge viscoelastic material — is fine-tuned to greatly improve impact management over traditional helmets. Developed in collaboration with the world's foremost leaders in helmet safety. Tested under rigorous scientific review to exceed ECE and DOT standards. Enjoy elevated defense against a wider range of impacts when you ride with the Formula.

Expanded
Volume EPS

Quick release
cheek pads

True functional
ventilation (TFV)

12K carbon fiber shell

Conehead® EPS technology

Clavicle shell relief zone

FORMULA CARBON VECTOR HELMET

XS - 2X

STANDARD:

- ECE / DOT approved

ADAPTIVE IMPACT SYSTEM:

- 12K carbon fiber shell produces an extremely lightweight shell with superior penetration resistance
- Impact Energy Cells made of RHEON, the Impact Energy Cells maximize absorption of low speed linear and rotational impacts, reducing forces transmitted to the brain
- Conehead® EPS Technology provides a softer liner whereby the cones help manage or absorb an impact force more efficiently. Six critical zones have been fine tuned for a progressive response to low speed and high speed impacts
- Expanded volume EPS means strategic areas of the helmet have more impact absorbing EPS, more suspension between your head and the ground

CONSTRUCTION:

- EPP chin bar-Expanded polypropylene creates an additional element of impact mitigation
- Clavicle shell relief zone creates a soft zone filled with EPS and EPP to aid in reducing clavicle injuries
- Custom molded rubber trim with integrated nose guard
- Lightweight custom visor screws and titanium alloy D-rings

WEIGHT:

- 1290 grams +/-50 (size medium/large)

COMFORT:

- Comfort liner and quick release cheek pads are made of a washable moisture wicking, anti-microbial material

VENTILATION:

- True Functional Ventilation (TFV)-When in motion air is forced through multiple air intake vents, then passed through aligned vent channels in the EPS and exits out multiple rear exhaust vents

INCLUDED ACCESSORIES:

- Premium helmet garage
- Extra visor

OPTIONAL ACCESSORIES:

- Cold weather breath guard:
XS - LG **73-47209**
XL - 2X **73-47210**
- Cold weather helmet liner:
73-47220(XS - 2X)

FORMULA

ADAPTIVE IMPACT SYSTEM

THE NEW FORMULA HELMET

FLY Racing is proud to present the all new Formula helmet, one of the most advanced motocross helmets ever created. Tested on the most advanced equipment in the world, the Formula helmets overall performance is best in class in both high velocity crashes as well as rotational and low speed impacts. This technologically advanced helmet redefines helmet performance and safety expectations.

BUILT FROM THE INSIDE OUT

The Formula's Adaptive Impact System (AIS) is the result of years of collaborated research and design with industry leading doctors, scientists, and physicists from around the world. AIS is a high-performance ecosystem of structural design and energy mitigating materials. Each layer from Energy Cells, to the dual-density EPS liner, and the 12k carbon fiber shell, was carefully fine-tuned to achieve superior head protection from the widest possible range of real-world impacts.

S U S P E N S I O N R E • D E F I N E D

ENERGY CELLS ENHANCED BY RHEON

Impact Energy Cells maximize absorption of low speed linear and rotational impacts. Their unique shape and maze-like structure allow them to compress and shear. This slight movement maximizes absorption of low speed linear and rotational impacts reducing overall brain stress.

These Energy Cells are made of RHEON, an "active" strain-rate sensitive material that efficiently absorbs and dissipates energy as it deforms. RHEON's adaptive chemistry reacts instinctively to control energy and change its behavior depending on the severity or direction of an impact.

CONEHEAD TECHNOLOGY

Like a crumple zone, Conehead technology absorbs and dissipates impact forces more effectively than traditional EPS helmet liners. Conehead technology produces more progressive energy absorption through a broader range of impact scenarios.

The Formula has six critical zones of Conehead EPS. Each zone has a uniquely fine-tuned combination of EPS densities for a more progressive response to impacts specific to that region of the helmet.

EXPANDED VOLUME EPS

Studies have shown that the majority of impacts occur on the forehead or side of the head. To help combat these impacts, the Formula development team incorporated lower density expanded volume EPS (thicker EPS) in these critical zones. This expanded volume EPS provides improved suspension for impacts.

12K CARBON FIBER SHELL

The Formula's first line of defense is an extremely strong and lightweight 12K carbon fiber shell. 12K carbon fiber refers to 12,000 carbon filaments per band. Carbon fiber is strongest when it is flat. Wider carbon fiber bands woven together produce a flatter result with less dips and rises inherent in a woven material. The reduction of these dips and rises creates less areas for resin to pool. Less resin equals less weight. The result is an extremely lightweight shell with superior penetration resistance to common 3K carbon fiber.

MEET THE DOCTORS, AND SCIENTISTS

DR. DANIEL PLANT *PhD MENG MA*

Dr. Plant is a mechanical and industrial design engineering expert and Entrepreneur Fellow of the Royal Academy of Engineering, London UK. He invented RHEON, the "active" strain-rate sensitive material revolutionizing the "impact energy control" space.

DON MORGAN *Physicist*

Don Morgan is the inventor of Conehead technology. Morgan has spent more than 20 years researching the effectiveness of motorcycle and bicycle helmets and developing the new shock absorbing foam liner for helmets.

FORMULA HELMET BENCHMARK DATA TESTING

Testing was conducted by two separate independent test labs: SATRA Technology and RHEON LABS

HELMET TESTING PROTOCOL

Testing the FLY Formula was primarily to confirm that this helmet would provide the highest level of performance and protection across a wide range of impact scenarios.

We identified the top 10 MX helmet brands in the world at the time of testing and tested their best helmet models. In total 60 helmets were tested between SATRA and RHEON LABS altogether comprising 150 individual impacts.

Three helmets of each model were sent to SATRA to be independently tested to ECE standards, for both crown and front-side impacts. 30 helmets were tested and recorded.

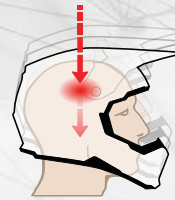

Three helmets of each model were tested on a bespoke test rig at RHEON LABS for a wide range of real-world impact scenarios, gathering a wide range of rotational and linear impact data. 30 helmets total were tested and recorded.

LINEAR IMPACT

A linear impact is any impact in the normal direction of the helmet. These often act through the center of gravity.

Most helmets have been designed to protect against high speed linear forces with the intention of preventing skull fracture. However, lower speed linear forces can also cause traumatic brain injury and therefore it is important to protect across the full range of linear forces.

Linear tests on the helmets were undertaken to ECE standards by SATRA, an independent test house.

ROTATIONAL IMPACT

A rotational impact is any impact that strikes the head with any tangential component, these are often called oblique impacts or glancing blows.

Most falls in motocross include some rotational element.

These impacts are strongly linked to mild traumatic brain injury (mTBI). However, these impacts are not accounted for by testing standards today.

All oblique testing was undertaken at RHEON LABS on their bespoke test rig according to advanced testing methods outlined in IRCOBI Conference 2016 paper.*

30 helmets were tested for linear impacts at SATRA, totaling 60 individual impacts.

30 helmets were tested for rotational impacts at RHEON LABS, totaling 90 individual impacts.

HELMET PERFORMANCE RANKING

FSL - Front Side Left
FSR - Front Side Right
BSR - Back Side Right
FS - Front Side
C - Crown

	Formula	A	B	C	D	E	F	G	H	I
	1268g	1343g	1394g	1396g	1413g	1415g	1486g	1552g	1557g	1597g
Weight	1	2	3	4	5	6	7	8	9	10
Linear FSL	1	7	8	9	2	5	3	4	10	6
Linear BSR	2	4	8	6	5	3	1	10	9	7
Linear FSR	1	4	8	9	2	5	3	6	10	7
Rotational FSL	4	2	8	9	1	5	3	7	10	6
Rotational BSR	2	3	8	7	5	4	1	10	9	6
Rotational FSR	3	4	9	7	1	5	2	8	10	6
HIC FS	1	3	10	5	4	6	2	7	9	8
HIC C	3	6	10	4	5	2	1	7	9	8

CONCLUSIONS

Results show the Formula helmet is significantly reducing both the linear and rotational accelerations experienced by the headform during front oblique impacts.

A ranking system was developed to rank the 10 leading MX helmets tested. It takes into consideration all of the tests undertaken and outlined in this document – from tests for high and low speed linear accelerations, including HIC scores, as well as for high and low speed rotational accelerations.

The ranking also includes a factor of weight, as we believe reducing helmet mass is critical to our riders. The Carbon Formula is the lightest helmet in this range, beating all nine other leading MX helmets. These are the results based on this ranking.

Testing concluded the Formula is a very high performance helmet which can significantly reduce linear and rotational accelerations. The FLY Formula is also shown to outperform the competition in an overwhelming majority of cases tested.

Totals are the sum of the above test rankings. The lowest number represents the best overall performance.

Rank Totals	18	35	72	60	30	41	23	67	85	64
--------------------	-----------	-----------	-----------	-----------	-----------	-----------	-----------	-----------	-----------	-----------

INDEPENDENT 3rd PARTY TESTING BY SATRA TECHNOLOGY

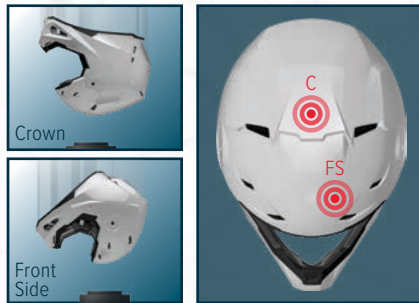

SATRA TECHNOLOGY CENTRE, UK

SATRA is a leading independent testing house based in the UK. All external testing was completed in accordance with ECE 22.05 using a kerbstone anvil at 7.5 m/s.

ECE 22.05 is a high speed linear impact test for helmets devised to prevent skull fracture in high impact events.

Each of the 10 models of MX helmets were tested in both crown and front-side locations. These tests were then repeated on three separate helmets of the same models. Peak deceleration was noted and a Head Injury Criterion (HIC) score was given for each tested impact.

SATRA Impacts Test Locations

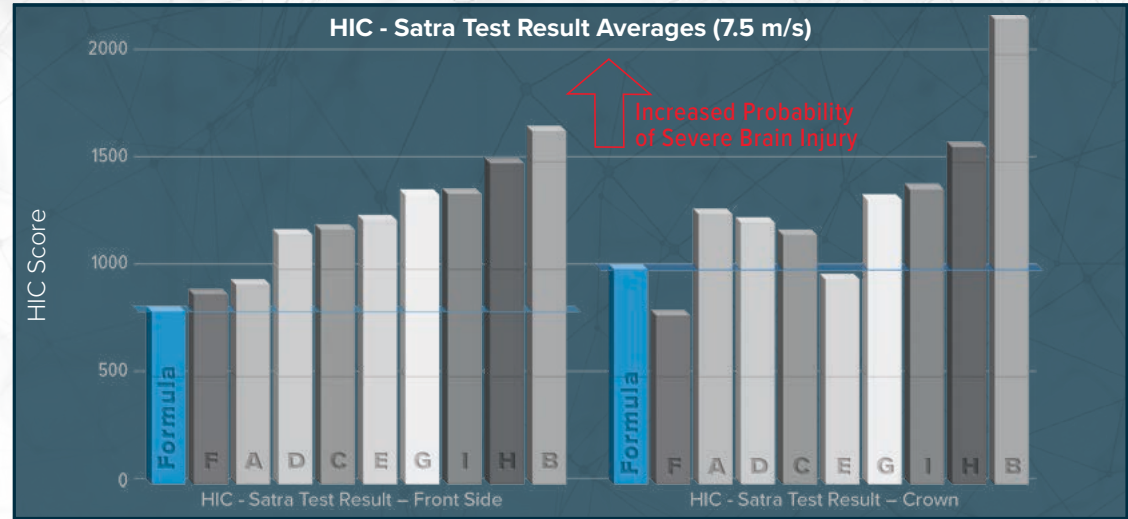

HEAD INJURY CRITERION

The Head Injury Criterion (HIC) equation measures the risk of head injury. For helmets this is calculated using acceleration data derived from standard ECE linear drop tests.

An impact with a HIC score of 3000 is representative of a 99% probability of severe brain injury. At an impact with a HIC score of 1000 that probability drops to an 18% risk

of severe brain injury and down to 5% at a score of 700.

Whilst these calculations are a useful indicator to measure the safety of a helmet, they should not be taken as universal scores. The possibility of sustaining a head injury from a crash is a highly variable event which is unique to the individual impact.

HELMET TESTING FOR REAL-WORLD SCENARIOS BY RHEON LABS

RHEON LABS LONDON, UK

The RHEON LABS state-of-the-art helmet test rig simulates both linear and rotational violence from 'real-world' events. These tests consist of a slider with a 30-degree wedge impacting a highly-instrumented bio-fidelic head (Hybrid III), neck and representative body mass. The tunable drop rig mimics the inertia of the human body which allows accurate representation of a head impact to be replicated.

Each of the 10 models of MX helmet was tested firstly

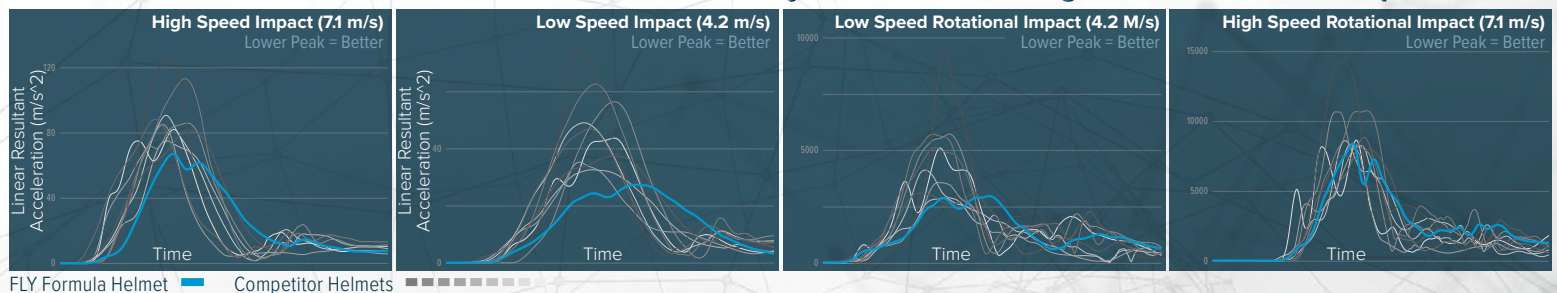

at front-side left (high speed 7.1m/s) followed by back-side right (high speed 7.1m/s) and lastly at front-side right (low speed 4.2m/s). The results for both linear and rotational acceleration data were recorded and the peak values noted for reference. These tests were then repeated on three separate helmets of the same models.

This testing method used the basis of the test method as described in IRCOBI Conference 2016 paper.*

RESULTS

These graphs show the best traces of all models of helmets tested. The reduction in peak acceleration achieved by the FLY Formula can be seen at high and low impact speeds in the traces of these four graphs, demonstrating that the helmet is working over a wide dynamic range of impacts.

The FLY Formula Helmet Consistently Performed Amongst the Best for All Impacts Tests.

F2 CARBON HELMETS

Designed to protect with a fit and feel that never gets in the way, the F2 has earned high praise as one of the best helmets out there — and for good reason. Easy comfort. All-time protection. A seriously sleek look. Features a one-piece tri-composite carbon fiber shell, mouth guard, Multi-Directional Impact Protection System (MIPS) and strategically placed venting for superior airflow. Go faster and soar higher with the elevated protection of the F2.

Multiple intake ports and exhaust vents connected to an accurately integrated EPS airflow system

Quick release, COOLMAX® comfort liner and cheek pads

High-flow mouthpiece

Seamless one piece mouth guard and chin bar construction

FLY Racing helmets meet the toughest safety standards in the market

TFV (True Function Ventilation)

MIPS® Multi-Directional Impact Protection System

Strong and lightweight machined aluminum visor screws

Stainless steel rivets and D-rings

F2 CARBON MIPS® GRANITE HELMET

XS - 2X

STANDARD

- ECE / DOT approved

CONSTRUCTION

- MIPS® Brain Protection System: helmet-integrated, low-friction layer designed to reduce rotational motion transferred to the brain from angled impacts

TOXIN HELMETS

The Toxin helmet combines safety and style, bringing protection into a range most others can't match. The durably lightweight polymer shell combined with the ventilation of its dual-stage EPS means you get solid protection where it counts and blasts of fresh air to keep breathing easy. DOT/ECE 22.05 approved with integrated Multi-Directional Impact Protection System (MIPS) to help reduce the risk of rotational forces. Whether you're dominating at the track or riding your favorite trail, just slip on the Toxin and let it take over.

PROTECTION

FLY Racing protective products are made from cutting edge materials and designed to move with you. Whether you're dodging trees or logging laps at the track, FLY Racing has the full-range of protective gear to safeguard you for every ride.

I REVEL RACE ROOST GUARD

Available in 2 versions: Race (low-profile) or Offroad (added shoulder and arm protection)

CONSTRUCTION

- Revolutionary BioFoam® chassis attachment system eliminates injury-causing plastic rivets and utilizes soft plastics and TPR rubbers without high points that could injure in the event of an impact
- Air channels molded into the BioFoam allow hot air to escape

FEATURES

- Full upper torso plastic roost deflector
- Neck brace compatible design: simply slide underneath the plastics or remove the plastic panels on the chest and back depending upon neck brace design
- Removable thermoformed soft BioFoam chassis for increased comfort and easy washing
- Multiple vents for maximum airflow

FIT

- Adjustable shoulder straps for a custom comfortable fit
- Easy-to-use waist belt buckles integrated into the chest plastic
- Low-profile design can be worn under jersey

Offroad Version

I CE REVEL RACE ROOST GUARD

Available in 2 versions: Race (low-profile) or Offroad (added shoulder and arm protection)

CE CONSTRUCTION

- CE rated protection created using a triple layer, high density memory foam in between the outer plastic and the BioFoam® that is in contact with the user. Triple layer construction (as opposed to a single thick layer) allows layers to move relative to one another further improving impact performance

OUTERWEAR TECHNOLOGY

Fly Racing snow gear is dedicated to providing industry leading technology and innovation. We offer three levels of waterproof and breathable protection with durable abrasion-resistant materials. Whether on the trail, track, or mountainside, don't let your apparel's performance hold you back.

MODEL	STYLE	FIT	WEATHERPROOF	CONSTRUCTION
INCLINE	MOUNTAIN TRAIL  * CROSSOVER	STANDARD FIT	SympaTex®	 SHELL
CARBON	MOUNTAIN 	ATHLETIC FIT	HYDRAGUARD^{PRO}	 SHELL
SNX PRO	RACE  * CROSSOVER	STANDARD FIT	HYDRAGUARD	 SHELL WITH REMOVABLE INSULATED LINER
OUTPOST	TRAIL 	GENEROUS FIT	HYDRASHIELD	 HEAVY INSULATED
AURORA	TRAIL 	STANDARD FIT	HYDRAGUARD	 MEDIUM INSULATED

STYLE

MOUNTAIN

Our highest-performing style for attacking the harshest conditions. Fit for any terrain and all weather types.

RACE

Loud and aggressive style for making a statement on or off the track. Fit for more vigorous riding and all weather types.

TRAIL

Comfortable and protective style that allows for all-day versatility. Fit for the trails, everyday usage, and all weather types.

FIT

ATHLETIC FIT
Contours to your body, longer length

STANDARD FIT
Not too slim, not too loose

GENEROUS FIT
Generous cut but not oversized

* CROSSOVER - Combination of multiple styles in a single garment

WEATHERPROOF TECHNOLOGY

LEVEL 3

HYDRAGUARD^{PRO}

Hydraguard Pro protective membrane features the highest quality of waterproofness and breathability. It has optimal bonded construction with fully taped seams allowing for lighter weight and more durable weather protection. Hydraguard Pro adds valuable strength and performance to your gear.

LEVEL 2

HYDRAGUARD

Hydraguard protective membrane meets and exceeds industry standards. It provides superior waterproofness and breathability. Hydraguard has fully taped seams and is designed for performance in any condition.

LEVEL 1

HYDRASHIELD

Hydrashield protective membrane provides weatherproofness and breathability. It offers different technologies to provide needed protection during most conditions.

WARRANTY

FLY Racing provides a two year warranty to our valued customers. This warrants our products to be free of defects in materials, contents and workmanship for two year from the date of purchase.*

* SOME RESTRICTIONS MAY APPLY

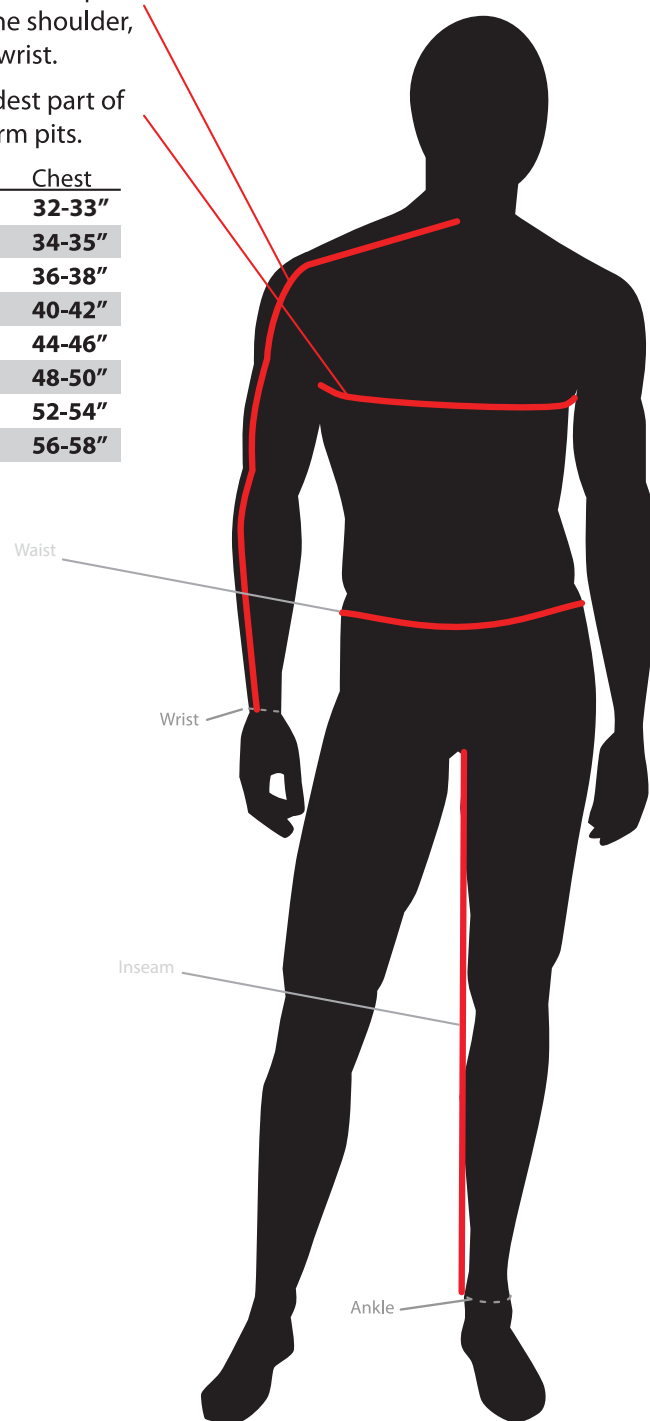

Snow Jackets

Sleeve- Measure from the center of the spine at the base of the neck, around the shoulder, over the elbow and down to the wrist.

Chest- Measure around the broadest part of the chest, 1-2 inches below the arm pits.

Size	Sleeve	Chest
XS	30-31"	32-33"

CM	47 - 48	49 - 50	51 - 52	53 - 54	55 - 56	57 - 58	59 - 60	61 - 62	63 - 64	65 - 66	67 - 68	69 - 70

This chart is for reference only – refer to appropriate pages to order parts

GLOVE SIZES

Finger proportions vary from person to person. Estimate your glove size according to your longest fingers for a comfortable fit. The Example hand below would be a size large.

The ball of your thumb should be just in front of the line
