- Searchable Size Charts
- Searchable UPC Codes
- New Product Releases
(updated as products are released)

NOTICE

Many applications in our Automotive and Light-Duty Truck Applications (1980-on) sections have a dual number. The second number indicates that a Casite filter manufactured by Hastings is also available. In addition, we are realigning the Casite part numbers so that the Hastings and Casite base numbers are the same, allowing you to access specification information by looking up the Hastings equivalent in the Product Guide.

DOMESTIC VEHICLE ENGINE IDENTIFICATION

Originally, Vehicle Identification Numbers (VIN) were designated to identify a vehicle, but there was no standardization. Beginning in 1981, vehicles were assigned an international VIN code consisting of 17 characters (which cannot include the letter I, O or Q) unique to each vehicle.

The VIN serves a variety of purposes. As well as providing identification in licensing and insuring the vehicle, the history of the vehicle can be tracked. VIN codes provide complete vehicle information including:

- is the vehicle defective (lemon car)
- has the vehicle been totaled or had major accident damage
- has the vehicle had flood damage
- has the vehicle had odometer fraud
- has the vehicle been stolen

To help decode the VIN, the following information has been provided:

- **1st - 3rd Characters**
Identify the manufacturer (country), make and type of vehicle.
- **4th - 8th Characters**
Identify the different aspects of the vehicle.

For each type of vehicle (passenger cars, multi-passenger vehicles (MPVs), trucks, buses, trailers, motorcycles, incomplete vehicles other than trailers) different information is required.

For cars, MPVs and light-duty trucks:

- 4th - 5th positions** are alphabetic
- 6th - 7th positions** are numeric
- 8th position** can be either alphabetic or numeric

- **9th Character (or Check Digit)**
Is determined by a complicated formula.

Each character is assigned a numerical value and then multiplied by the value assigned to its position. These values are added and then divided by 11. The remainder is the Check Digit. This character can be numeric or the letter X.

- **10th Character**
Identifies the vehicle model year.

- **11th Character**
Identifies the plant of manufacture.

- **12th - 17th Characters**
Consists of a sequential production number for manufacturers producing more than 500 vehicles per year.

VIN plates are read through the windshield on the driver's side of most vehicles. A manufacturer may use a variation of the same size engine in one model. To insure that you are using the correct filters for the application, it is necessary to identify the proper engine code. The following examples illustrate the location of the engine code in most manufacturer's VIN codes.

1980-ON AUTOMOTIVE SECTION

Alphabetically by Make

All automobiles, light-duty trucks and vans are listed in this section alphabetically by make.

By Year

Within each make, all automobiles, light-duty trucks and vans are listed in year sequence from the latest to the earliest year shown.

Alphabetically by Model Name

Within each year, all models are arranged alphabetically. If the model begins with a number, it will be listed numerically before the alphabetically listed models.

By Engine Size

Under each model, the engines are listed according to size, from the smallest to the largest. Sometimes, more than one variation of the same size engine is listed under one model. These engines are sorted by VIN code.

MOTORCYCLE SECTION

Alphabetically by Make

All motorcycles are listed in this section alphabetically by make.

PRE-1980 AUTOMOTIVE SECTION

Alphabetically by Make

All automobiles, light-duty trucks and vans are listed in this section alphabetically by make.

By Year

Within each make, all automobiles, light-duty trucks and vans are listed in year sequence from 1979 to the earliest year shown.

Models are listed at the beginning of each year, with engine size, when known.

By Engine Size

Within each year, the engines are listed according to size, from the smallest to the largest engines.

TRANSMISSIONS

Transmissions are arranged alphabetically by manufacturer, then numerically by model number.

IMPORTANT NOTICE

All product applications and specifications in Hastings catalogs are based upon the most authoritative information available at the time of publication. However, there are many filter options offered by equipment manufacturers during a given model year making it impossible to be absolutely certain that all equipment of the same make, model and year will use the same filter. For this reason, we cannot be responsible for misapplications.

Original equipment manufacturer's tradenames or trademarks are for identification purposes only. There is no affiliation, sponsorship or connection with the original equipment parts or manufacturer.

SPIN-ON FILTER INSTALLATION INSTRUCTIONS

An increasing number of motorists today are performing oil and filter changes on their cars. However, present installation instructions vary from manufacturer to manufacturer, and may be confusing to the installer.

These instructions may be used in changing any spin-on oil filter.

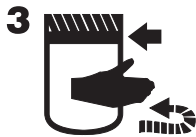

1. **Clean base.**

Unscrew and remove old filter. Be sure old gasket is removed with filter. Wipe filter mounting base with clean cloth.

2. **Apply clean oil to gasket.**

Apply thin film of clean motor oil to new filter gasket. Do not use grease.

3. **Hand tighten to gasket contact.**

Line up threads carefully to avoid cross-threading. Spin new filter on until gasket contacts base.

4. **Tighten additional turns.**

Important – Follow instructions (usually found on filter) of the filter manufacturer for final tightening.

5. **No leaks.**

Be sure oil shows full on dipstick. Start engine and check for leaks. Correct source of any leaks observed. Shut off engine. Re-check oil level. Add oil if necessary.

6. **Inspect for dents.**

Important – Do not use filter if it is dented.

DISPOSAL OF USED OIL FILTERS

The Resource Conservation and Recovery Act (RCRA) provides that generators of waste materials are to determine whether those wastes are hazardous. This determination may be made in one of two ways: either the waste is specifically listed as hazardous, or the generator must make the determination.

Used filters, like most other wastes, have never been listed as hazardous waste. Therefore, generators of used filters have been required to test these wastes using the Toxic Characteristics Leaching Procedure (TCLP) to determine if the waste should be classified as hazardous for purposes of handling and disposal. On May 20, 1992, the EPA made further ruling on the regulations regarding disposal of used oil filters. Effective with this ruling, all used oil filters manufactured with non-terne plated material, which have been gravity hot drained, no longer must be tested prior to disposal. (It should be noted that at this time this easing of regulations only applies to oil filters, not other wastes or other filters.)

There are various methods of gravity hot draining filters including (1) puncturing the filter's anti-drainback valve or the dome end of the filter and hot draining, (2) hot draining and crushing, and (3) dismantling and hot draining. In addition, any other equivalent hot draining method may be used. "Hot drained" means that the oil filter is drained at or near the engine operating temperature and above room temperature (i.e. 60°F).

The length of time for draining is not specified, although testing has demonstrated that draining for

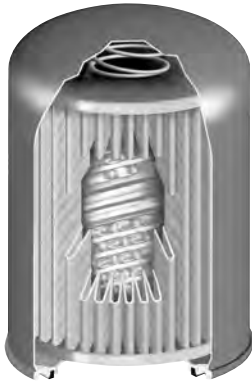

12 hours is sufficient to remove excess used oil. At the very least, in order to enjoy this exemption from testing, no used oil should immediately leak or drip from a used filter.

It is noteworthy that used filters which are recycled are exempt from RCRA. Recycling takes care of wet filters (fuel, hydraulic, coolant) which are currently not exempt.

Hastings understands the difficulties faced by users and disposers of oil filters. The Filter Manufacturers Council (FMC), of which Hastings is a member, agreed to eliminate the use of terne plated material in filters by December 31, 1992. Hastings further adopted a policy to eliminate terne plated material from production by October 1, 1992, a goal which has been reached. The FMC is currently working with the EPA to gain exemption for other types of wet filters.

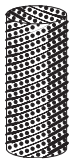

Filter users will be able to access the database to obtain a summary of state disposal regulations and a list of companies providing used filter transportation, processing and recycling services in a particular state. The database will also include regulatory information for the Canadian provinces as it becomes available.

SPIN-ON FILTER CONSTRUCTION

Not all filters have the same parts inside, but this page shows components of a typical spin-on (starting on the inside and working out).

CENTERTUBE

Spiral wound, louvered centertube forms the center of most non-air filters. The filtering media is placed around this centertube. On larger filters, a reinforcement or centering guide is sometimes added.

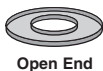

PLEATED FILTERING MEDIA

Used in most "surface type" filters where contaminants are trapped on the surface. The greater the surface, the greater the capacity.

Hastings uses more than sixty different media, depending on the application.

ELEMENT END CAPS

End caps (of metal, plastisol or paper) are bonded to the filtering media to prevent unfiltered liquid from by-passing (going around instead of through) the media. Some elements are constructed with two open ends. Others have one open and one closed end.

COMPRESSION SPRING

Holds element in place to make sure the element seal remains intact.

BY-PASS VALVE

All full-flow lube systems require a by-pass (relief) valve to permit oil to flow to the bearings even when cold oil is too thick to flow through the filter. The valve also opens when the filter becomes plugged. If not located in the engine system, there must be a by-pass valve in the filter. (It can be both places, providing the one in the spin-on opens at the same or higher pressure than the one in the system.)

ANTI-DRAINBACK VALVE

The position of the installed filter determines the need for this valve in a filter. This keeps the oil from draining from a filter when the engine is shut off. (If the filter hangs downward from the base, or "dome end down," this valve is not needed, but would cause no problems if included.)

BASEPLATE AND SEAMING COVER ASSEMBLY

The baseplate is attached to the seaming cover and the seaming cover is attached to the can. Be sure the gasket on the baseplate seals with the mounting surface when you install a spin-on filter.

SPIN-ON FILTER CAN

You change spin-on filters quickly because there is no housing to clean. The entire unit is changed each time.

HASTINGS FILTERS DATE CODING METHODS

You will find several different date coding methods used on Hastings products and packaging. Please look for one of these coding methods whenever you are trying to find the date of manufacture for a Hastings product.

■ **Six (6) Digit Numeric Code - e.g. 010317**

Introduced November 8, 2002 (Replaces (3) Digit Numeric Code)

1st Two Digits	- 01 -	indicate month (January)
2nd Two Digits	- 03 -	indicate day of month (3rd)
Last Two Digits	- 17 -	indicate year (2017)

■ **Eleven (11) Digit Numeric Code - e.g. 08291714301**

Introduced November 8, 2002 (Replaces (10) Digit Numeric Code)

1st Two Digits	- 08 -	indicate month (August)
2nd Two Digits	- 29 -	indicate day of month (29th)
5th and 6th Digits	- 17 -	indicate year (2017)
Next 4 Digits	- 1430 -	indicate time of day (Military) (2:30 p.m.)
Last Digit	- 1 -	indicates filter line

Date Coding Methods Used Prior to 2003

■ **Three (3) Digit Numeric Code - e.g. 082**

1st Two Digits	- 08 -	indicate month (August)
Last Digit	- 2 -	indicates year (2002)

■ **Ten (10) Digit Numeric Code - e.g. 0829214303**

1st Two Digits	- 08 -	indicate month (August)
2nd Two Digits	- 29 -	indicate day of month (29th)
5th Digit	- 2 -	indicates year (2002)
Next 4 Digits	- 1430 -	indicate time of day (Military) (2:30 p.m.)
Last Digit	- 3 -	for internal control purposes

■ **Numeric Digits and Diamonds - e.g. 234 ◆◆◆◆**

1st Digit	- 2 -	indicates last digit of the year (2002)
Diamonds	- ◆◆◆◆ -	indicate month (August) Number of diamonds subtracted from 13 equals the month (13 - 5 = 8 = August)

PRODUCT INVESTIGATION

Procedure for Service Engineering Product Investigation

This procedure outlines the steps necessary for Hastings Filters Service Engineering to complete an investigation of product from the field. The steps of this procedure are necessary to provide the most accurate and timely investigation possible.

If a filter is suspected of causing a failure, don't throw away the evidence. Instead, in order to process a warranty claim, follow the Product Investigation Procedure . . .

1. Complete a Field Report Form (F350). Describe the events on a separate sheet.
2. Obtain a sample of oil, fuel or coolant in the system at the time of the failure.
3. Save damaged parts for evidence of the claimed damage.
4. For an air filter, cover the open ends with tape to prevent dust from entering the element during shipping.
5. Send copies of any repair bills.

6. Send the entire suspect filter, including the gaskets.

If the investigation is being requested for warranty consideration, repair bills (not estimates) should also accompany the request. Damaged equipment components such as bearings, liners, etc. should be retained by the customer for possible examination by Service Engineering.

Filter products are **NOT** to be cut open or otherwise tampered with. This may prevent objective analysis and testing, and **may void the warranty**.

Notice of damages and claims should be made immediately when the damage occurs. Every claim will receive careful and objective consideration. If a Hastings product is proven to have caused damage, Hastings will pay the cost required to repair the equipment to its condition at the time the failure occurred. Liability payment will not include consequential damages such as downtime, motel bills, etc.
