Issued March 2019

2019 WIX FILTERS APPLICATION CATALOG
PASSENGER CARS, LIGHT TRUCKS, AND VANS

**CATALOGO DE APLICACIONES
WIX FILTERS 2019**

Terms and Conditions

This Catalog is intended solely for use by purchasers or potential purchasers of aftermarket automotive parts, equipment and supplies and related services from Mann+Hummel Filtration Technology, Inc. ("Customers"). If you are not a Customer, this notice applies to you:

© 2019 Mann+Hummel Filtration Technology, Inc. All rights reserved. No part of this Catalog may be reproduced or utilized in any format, by any means, electronic or mechanical, including photocopying, scanning, or recording in any information retrieval or storage system, without the prior written permission of Mann+Hummel Filtration Technology, Inc. In particular, without limiting the foregoing, no part of this Catalog may be incorporated into another work of any kind in any format that catalogs, lists, offers or specifies aftermarket automotive parts, equipment or supplies or related services not sold by Mann+Hummel Filtration Technology, Inc .

If you are a Customer, your use of this Catalog is subject to the following Customer Agreement:

By using this Catalog, you agree to be bound by this Agreement. If you do not wish to be bound by this Agreement, then do not use this Catalog, and do not reproduce, record or use any Content from this Catalog.

Content

All information in any medium or format furnished by Mann+Hummel herein, including text, images, data, graphics, links, captions, or other information (collectively, "Content") is owned by Mann+Hummel or our Content providers. All Content is protected by U.S. and international copyright laws. All rights not specifically granted under this Agreement are reserved to Mann+Hummel.

You may, subject to the terms and conditions of this Agreement:

- a) Use the Catalog for your internal use, solely to look up information related to aftermarket automotive parts, equipment or supplies or related services referenced in the website in the ordinary course of business;
- b) Use the Catalog to investigate respond to inquiries from, or to provide quotations, purchase orders or invoices, to your customers; and
- c) If necessary in relation to either a) or b) above and to directly facilitate the sale of Mann+Hummel aftermarket automotive parts, equipment or supplies or related services, make a limited number of photocopies of one or more pages of this Catalog (but not all or substantially all of the Catalog).

You may not:

- a) Deliver, provide access to, directly or indirectly, or otherwise make the Content available to any third parties;
- b) Remove any copyright or other proprietary notices from the Catalog or any Content;
- c) Reformat or extract data from the Catalog or any Content, or incorporate the Catalog or any Content in whole or in part into another work of any kind in any format, including, without limitation, any work that catalogs, lists, offers or specifies aftermarket automotive parts, equipment or supplies or related services not sold by Mann+Hummel Filtration Technology, Inc.

General

By using this Catalog, you acknowledge that you have read this Agreement, understand it and agree to be bound by its terms and conditions. You further agree that it supersedes any proposal or prior agreement, oral or written, and that it cannot be modified except by signed written agreement. If you do not comply with the terms and conditions above, this Agreement shall automatically terminate, and the notice above directed to non-Customers shall apply to you.

How To Use This Catalog

The beginning of this catalog features helpful information about our cabin air filter line and their locations on vehicles as well as information about VIN codes, new numbers and an application section on motorcycles, ATVs and Utility vehicles.

Passenger Car/Light Truck Application Section

The passenger/light truck application section is listed by the manufacturer (make) of the vehicle first. Secondly, vehicles are arranged alphabetically by year and then model. Engines for that vehicle are then sorted by smallest to largest in order. VINs and engine codes are listed when needed to help with identification of the engines.

Transmission Filter Section

After passenger car/light truck, there is a section about our transmission filter line, complete with images.

The back section has information about Wix Racing products, technical service bulletins and warranty. Use your index on page one as a guide.

Introducing the Pollution Solution for Interior Air Filtration

WIX Filters wants to make sure that you are breathing the cleanest air possible in your car. You may not know it, but car manufacturers are installing air filters in today's vehicles that filter out contaminants and odors from the air you breathe inside your car. Experts have stated that the air inside your car can be 10 times worse than outside your car. The WIX Cabin Interior Air Filters are designed to remove particles as small as 0.03 microns. That's less than one-millionth of an inch in diameter. The recommended replacement interval is from 20,000 to 32,000 kilometers depending on your driving conditions.

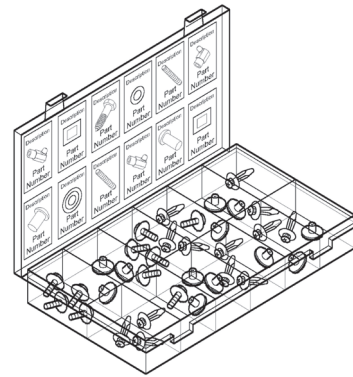

WIX Cabin Air Filters: Designed to Improve the Air Quality Inside Your Car

- Some vehicles have had cabin air filters for 25 years.
- Vehicle manufacturers are placing cabin air filters in today's models.
- The cabin air filter could be working all the time your car is running.
- The cabin air filter is filtering air whenever the heater, air conditioner or vent is on but not in the re-circulation mode.
- Clogged filters will cause both the air conditioner and heater cores to work harder, which could lead to damage.
- Clogged filters can reduce the airflow into the passenger compartment.
- 25% of the U.S. population suffers from some type of allergies. A new WIX filter will mean cleaner air to breath.
- In addition to filtering particles, some cabin air filters remove odors from the air.

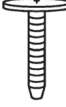

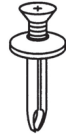

The WIX # 24250 Maintenance Kit

This assortment contains 10 various style screws, clips and retainers to assist installers when changing out many of the most popular cabin air filters. When replacing cabin air elements, often the screws, clips and retainers are damaged or lost. This kit is a great source for these hard to find parts.

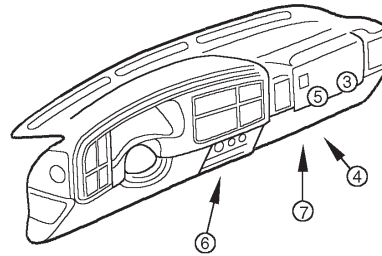

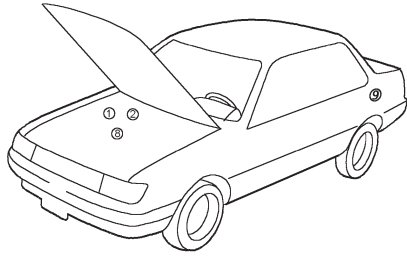

Note: These individual parts can now be purchased separately. Each part number comes in a pack of five or ten individual units per box. See chart below.

WIX Part #	Description	Qty. Per Pack
WCK1	Plastic Screw Taurus/ Sable	10
WCK2	Retainer Taurus/Sable	10
WCK3	Push on Clip Taurus/Sable	5

VEHICLE ENGINE IDENTIFICATION

BE SURE TO CHECK CATALOG BEFORE EVERY FILTER CHANGE

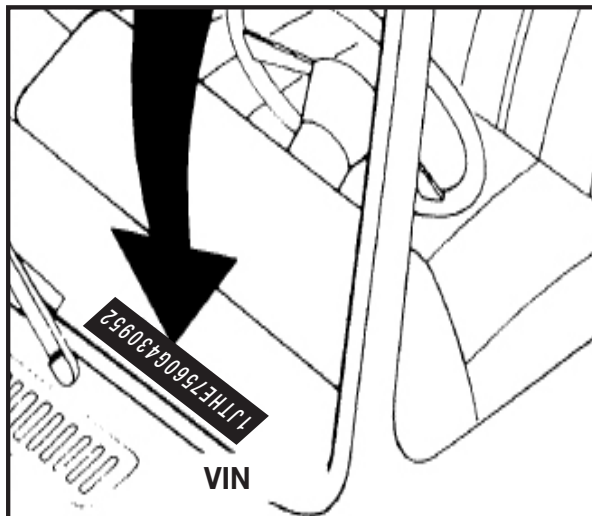

To properly identify the product for your vehicle, you must match the engine code from your Vehicle Identification Number (VIN) with the character listed in the Application section.

For vehicles manufactured by Chrysler, Ford or GM from 1970 to 1980, use the fifth character, and for the years 1981 to 2017 use the eighth character.

For vehicles manufactured by AMC/EAGLE (except Jeep) from 1970 to 1980, use the seventh character, from 1981 to 1988 use the fourth character, from 1989 to 1998 use the eighth character.

For vehicles manufactured by Jeep from 1972 to 1974 (up to Serial Number 100000), use the eighth character, from 1974 to 1980 use the seventh character, from 1981 to 1988 use the fourth character, and from 1989 to 2017 use the eighth character.

The VIN plate is located on the top dash panel - driver side of the vehicle. (See Illustration).

Footnotes

FN # English

- 1 Chrome version
- 3 California models
- 6 With Vapor Diverter
- 21 From Engine # 4717578
- 22 To Engine # 4717577
- 27 Various Transmission offerings for this vehicle- refer to Transmission section of Catalog located behind the Light Truck section.

- 32 Models with cartridge filter
- 44 Must reuse bracket from OE filter

- 45 In-line transmission filter
- 46 Models with air-conditioning
- 53 Also available in Masterpack version

- 61 Available until inventory is depleted
- 69 If two lines, this part is an accumulator and is not serviceable.
- 70 Also available in Masterpack version

- 71 Not serviceable- Lifetime fuel filter- usually in fuel tank
- 72 Manual Transmission
- 78 Charcoal Impregnated
- 79 Particulate
- 83 Universal style with adjustable cradles
- 85 From engine serial # AAA 176 890
- 86 To engine serial # AAA 176 889
- 137 Standard Corrugated version
- 138 With Bracket
- 139 Without Bracket
- 140 Square air panel
- 141 Rectangular air panel
- 142 Panel air filter for converted housing
- 143 Height 8.25
- 144 Height 6.5
- 146 Element only
- 147 Includes frame + filter element together
- 149 OE style with bracket
- 150 OE style without bracket
- 153 Without fuel return system
- 154 With pressure regulator
- 155 Standard version
- 156 Universal style with adjustable cradle on one end
- 158 1500 Series
- 159 2500-3500 Series
- 160 Convertible
- 161 Hard Top
- 162 Fuel/Water Separator
- 164 Optional filter, if cabin air kit installed by dealership

- 165 High-voltage battery pack filter located in the rear cargo area on the driver's side trim panel

- 166 Optional filter, not installed on all models

- 167 Up to VIN # M45254
- 168 After VIN # M45254
- 171 With auto-recirculation
- 172 Without auto-recirculation
- 173 High-Efficiency
- 174 Lifetime
- 175 XLE Trim
- 176 CE, LE Trim
- 179 This filter has a sensor port - must remove the sensor from the old filter and reinstall on the new

- 184 Has lid attached
- 187 Warm climate-left side
- 188 Warm climate-right side

Footnotes

FN # English

- 189 Cold climate-left side
- 190 Cold climate-right side
- 197 To Chassis # 049999
- 198 From Chassis # 050001
- 199 Up to Vin 040841
- 200 After Vin 040841
- 203 Before VIN LW34845
- 204 After VIN LW34846
- 205 Cabin air that goes inside the heater casing

- 206 New body style only
- 207 Old body style did not have cabin air filter

- 214 Old body style only
- 215 HX Sub-models only with M4VA-CVT transmission - cartridge style
- 216 If shorter clips required, order part # WCK11 separately - contains 10 duckbill clips per box

- 217 Truck or Bus applications with oil filter housing that has a spring-loaded long post - has lid attached to filter
- 219 Only to be used on applications that have a short post without spring in the oil filter housing - no lid attached

- 220 with Automatic Climate Control
- 221 without Automatic Climate Control
- 222 Has 2 threaded ends
- 223 Has 1 threaded end
- 224 Models with Automatic Transmission
- 225 For vehicles with JCW upgrade option
- 226 Includes pan gasket
- 227 Without pan gasket
- 228 Cabin air for optional roof unit
- 229 One 3/8 Line
- 230 Two 3/8 Lines
- 231 3 1/2 Height
- 232 5 1/2 Height
- 233 Heavy Duty Wrapped version - 5 1/2 Height

- 234 Heavy Duty Wrapped version
- 235 With pressure regulator valve - filter w/o pressure regulator, no replacement
- 237 Updated version with plastic Lid
- 240 Models w/ manual transmission
- 245 With 1 off-set line
- 249 Metal end caps
- 250 Plastic end caps
- 251 W210 Body
- 252 W211 Body
- 256 Up to 1/16/09
- 257 After 1/16/09
- 258 2 Pleat
- 259 4 Pleat
- 262 Up to 6/23/08
- 263 After 6/23/08
- 264 Up to 9/25/08
- 265 After 9/25/08
- 266 5.1 cartridge
- 267 4.1 cartridge
- 268 Up to 4/27/09
- 269 4/27/09 - on
- 271 Complete assembly - after this assembly is installed, only the element is required
- 276 Vehicles with HCC - Halla Climate Control Systems

- 277 Vehicles with DCC - Doowon Climate Control Systems
- 278 Vehicles with 6R60 Transmission - OE # FT161
- 279 Vehicles with 6R60 Transmission - OE # FT171

Helpful Hints For Transmission Filter Installation

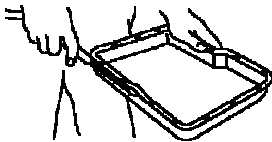

1 NO SPECIAL TOOLS REQUIRED. These are the simple tools required to do most normal replacement: •Speed Wrench • ½" Socket • Screwdriver • 7/16" Open End Wrench. No mechanical or hydraulic components in the transmission are disturbed during the change. The filter is simply removed with a screwdriver in just a few seconds and replaced in the same short time.

2 POSITION TRANSPAN, @DRAIN FLUID, REMOVE BOLTS AND DROP PAN.

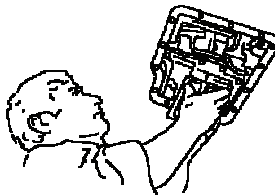

Start removing bolts at one corner, alternating from side to side, allowing pan to gradually tilt downward in one direction for easy draining.

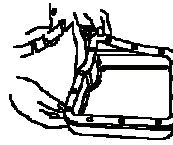

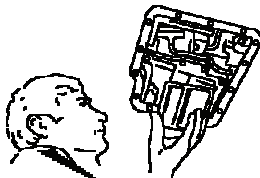

3 SCRAPE OFF OLD GASKET AND CLEAN PAN and case. Clean the pan inside and outside. Straighten pan around bolt holes.

4 REMOVE OLD FILTER. The filters are either held in place with bolts, screws or simply slip in and out.

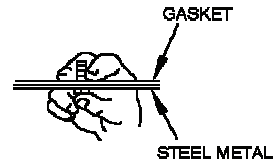

5 POSITION NEW FILTER AND REPLACE SCREWS. Everything you need to replace the filter is included in the filter kit, filter, pan gasket and "O" ring (when required).

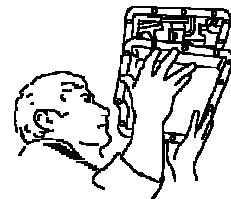

6 INSTALL NEW GASKET. Unfold gasket and place on top of the clean and dry sheet metal surface. **DO NOT USE ADHESIVE-SEALANTS.**

Align the GRIPPER™ gasket with the sheet metal. Then pass the bolt through the sheet metal and continue to press the bolt through the gasket material which has slightly undersize bolt holes. This procedure will retain the gasket to the sheet metal pan. Repeat this procedure until all bolts are in position. Wipe excess oil from the transmission flange. Avoid oil accumulation on pan gasket at time of assembly. Place transmission pan gasket assembly in alignment with transmission and install bolts.

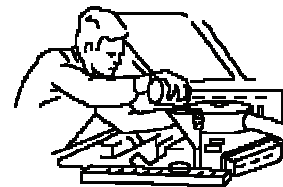

7 POSITION PAN TO CASE AND REPLACE BOLTS.

- (A) Hand tighten or use power tools with proper torque setting capabilities.
- (B) Snug up bolts. Start in center of pan; then continue to the opposite side, criss-crossing and working towards outer end of pan.
- (C) Tighten to 80 inch-pounds using the same sequence. (Based on 5/16-18 (NC) fastener)
- (D) Then apply final torque of 120 inch-pounds, repeating the bolt tightening sequence.

8* REFILL TRANSMISSION. Lower car.

Remove dipstick from oil filler tube, add transmission fluid as recommended by car manufacturer. Apply parking brakes, start engine in park, **DO NOT RACE ENGINE.**

Move control lever through each range. Immediately check fluid level with selector lever in park, engine running and vehicle on level surface. Add additional fluid to bring level to ¼" below the "add" mark on dipstick.

NOTE: DO NOT OVERFILL

***USE PROPER FLUID-CHECK OWNER'S MANUAL**

Magnetic In-Line Transmission Filter

58953 (7/16") / 58964 (5/16")

The Auxiliary In-Line Filter from WIX is specifically designed to remove contaminants commonly found in automatic transmission fluid.

Contaminated transmission fluid can cause premature transmission failure. The WIX Magnetic In-Line Transmission Filter extracts both ferrous and non-ferrous particles from transmission fluid, providing low cost added protection of the hydraulic and lubrication systems.

The WIX Auxiliary Filter features double-action full-flow filtration. A powerful plastic magnet attracts and holds ferrous wear material suspended in the passing fluid flow. It works in tandem with a sturdy paper element, reinforced by a steel sleeve, which traps the remaining non-ferrous contaminants as small as 25 microns. If the paper element becomes clogged with contaminants, a pressure relief valve assures continuous fluid flow, while the magnet continues to filter metallic particles from the fluid.

The Auxiliary In-Line Filter is engineered to withstand the extreme conditions an automatic transmission may undergo.

This WIX filter is built to perform in the harshest environments. They perform in the desert heat, as well as the polar cold. They also withstand under constant pressures of as much as 200 psi, as well as the pressure surges that can dredge up contaminants. In addition, it's built to handle the sudden impacts and severe vibrations even normal driving conditions can provide.

58963 (7/16") / 58964 (5/16")

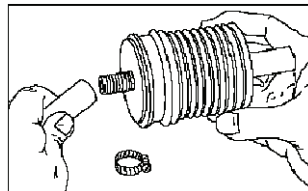

- ◆ WIX In-Line Transmission Filter takes only minutes to install in the transmission cooling line.

The In-line Auxiliary Transmission Filter Specially Designed For Today's Automatic Transmissions

Efficient: In independent testing, this WIX magnetic in-line filter removed over 95% of all metallic impurities introduced into the transmission fluid.

Durable: It continues to filter out contaminants even under the harshest conditions. In temperatures up to 350°F, the in-line filter's rugged construction can withstand constant pressures as high as 200 psi and intermittent short surges of even higher pressure. It is also shock and vibration resistant.

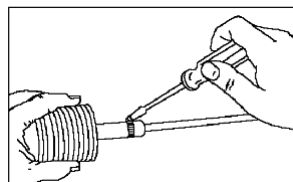

Easy to Install: The WIX magnetic in-line auxiliary transmission filter can be installed in less than ten minutes.... and replaced in less that five. Here's how:

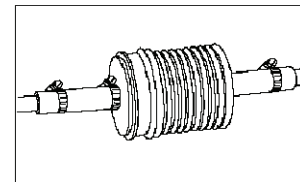

1. Insert short lengths of suitable hose onto filter couplings and firmly clamp.

2. Insert hose ends onto end of gap cut into cooling line, taking care to see that filter is properly oriented to fluid flow as indicated by flow arrow on filter.

3. Secure all clamps on the cooling line.

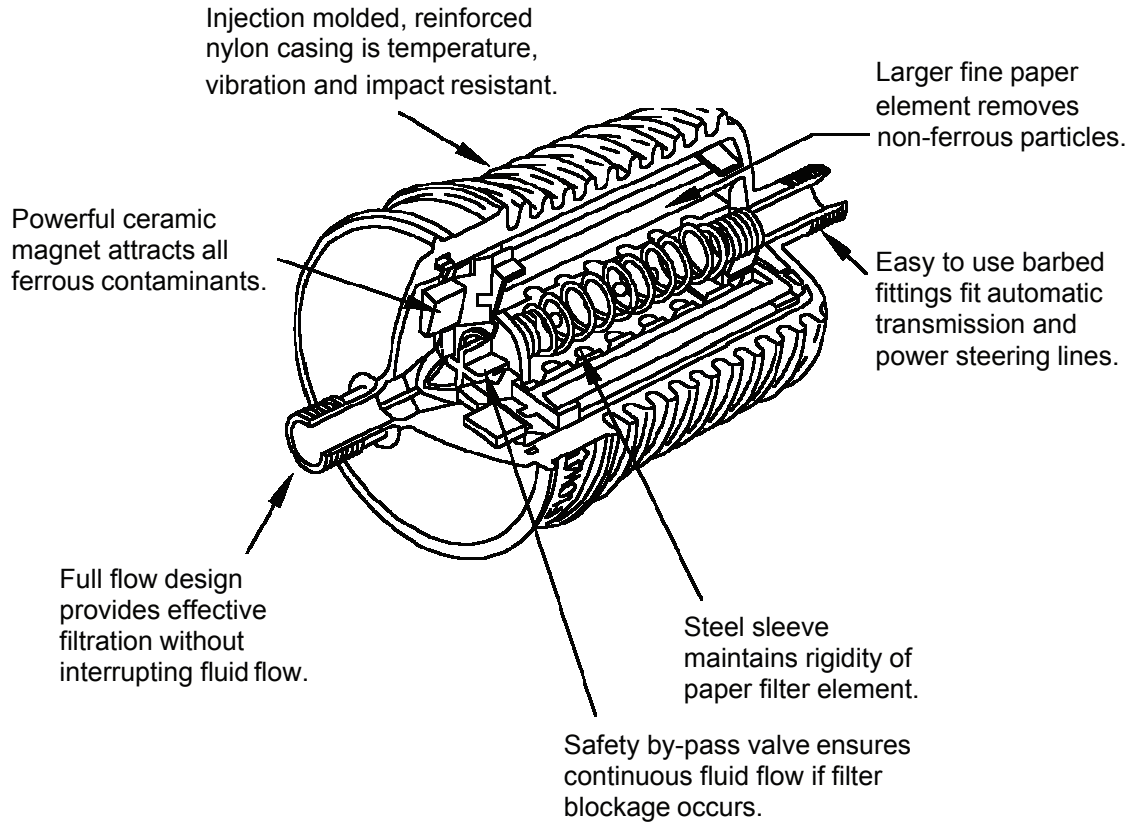

4. And you're finished.

It's the perfect preventive maintenance product, and it's from WIX.

Universal In-Line Transmission Filter (Can Also Be Used On Power Steering)

Note: On vehicles which have not experienced transmission failures, install into the cooler inlet line to protect cooler and transmission from contaminants. After an overhaul, install into cooler return line to trap contaminants that may remain in the cooler.

Includes 2 Adapter Hoses and 4 Hose Clamps

Warning: When used on power steering, install only on return side (Low Pressure Side).

Conseils utiles pour l'installation du filtre a transmission

1 AUCUN OUTIL SPÉCIAL NÉCESSAIRE. Ces outils simples conviennent à la plupart des remplacements ordinaires: 1 Clé à vilebrequin 1 Douille de 1/2 po 1 Tournevis 1 Clé ouverte de 7/16 po. Aucune composantes hydraulique ou mécanique sont perturbées dans la transmission lors du changement. Le filtre s'enlève simplement avec un tournevis en quelques secondes, et se remonte également en quelques instants.

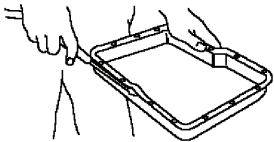

2 PLACEZ LE BAC DE VIDANGE, ET FAITES ÉCOULER L'HUILE, ENLEVEZ LES BOULONS ET ABAISSEZ LE CARTER.

Enlevez les boulons en commençant par un coin, puis en allant d'un côté à l'autre, en laissant le carter s'incliner graduellement vers le bas et dans un sens pour faciliter la vidange.

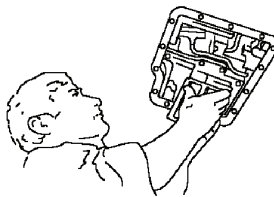

3 ENLEVEZ AVEC UN GRATTOIR LE VIEUX JOINT ET NETTOYEZ LE BAC ET LE CARTER.

Nettoyez l'intérieur et l'extérieur du bac. Redressez le bac autour des trous à boulons.

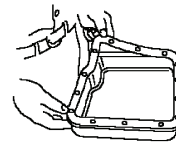

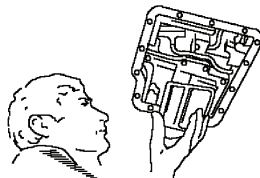

4 ENLEVEZ L'ANCIEN FILTRE. Les filtres sont maintenus en place soit avec des boulons, soit avec des vis, ou dans certains cas se glissent vers l'intérieur ou vers l'extérieur.

5 PLACEZ LE FILTRE NEUF ET REMETTEZ LES VIS.

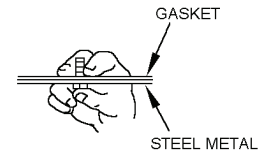

Tout ce dont vous avez besoin pour remonter les filtres est compris dans le nécessaire de filtre, filtre joint de carter et joint torique (si requis).

6 INSTALLEZ UN NOUVEAU JOINT

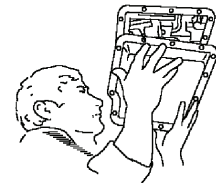

ou un joint réutilisable et placez-le sur la surface sèche et propre d'une tôle. **NE PAS UTILISER DE SCELLANT ADHÉSIF.**

Alignez le joint plat avec la tôle. Placez ensuite les boulons dans la tôle et enfoncez-les dans le joint car les trous dans ce dernier sont légèrement plus petits. Ceci permet de faire retenir le joint au bac en tôle. Répétez cette opération jusqu'à ce que les boulons soient en position. Essuyez l'excès d'huile du rebord de la transmission. Évitez d'accumuler de l'huile sur le joint au moment de l'assemblage. Placez l'ensemble joint et carter en l'alignant avec la transmission et mettez les boulons.

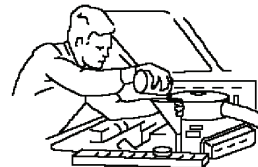

7 PLACEZ LE BAC SUR LE CARTER ET REMETTEZ LES BOULONS.

(A) Serrez à la main ou utilisez des outils mécaniques réglés à un couple approprié.
(B) Serrez les boulons juste assez pour éliminer le jeu. Commencez au centre du carter; puis continuez au côté opposé, en passant d'un côté à l'autre et en se dirigeant vers les deux extrémités du carter.
(C) Resserrez ensuite les boulons dans le même ordre selon un couple de 80 po/lb. (D'après une fixation de 5/16 - 18 (nc).
(D) En dernier lieu, serrez au couple de 120 po/lb, en suivant encore une fois le même ordre.

8* REMPLISSEZ LA TRANSMISSION.

Abaissez l'automobile. Retirez la jauge du tube de remplissage de l'huile, ajoutez l'huile à transmission comme il est recommandé par le fabricant. Appliquez les freins de stationnement,

démarrez le moteur, en position «park», **NE FAITES PAS EMBALLER LE MOTEUR.** Placez le levier de vitesse dans chacune des gammes. Vérifiez immédiatement le niveau de l'huile, le sélecteur étant en position «park», le moteur étant en marche et le véhicule se trouvant sur une surface plane. Ajoutez de l'huile supplémentaire pour amener le niveau à 1/4 po en dessous du repère «add» (ajouter) de la jauge.

NOTE: NE PAS TROP REMPLIR.

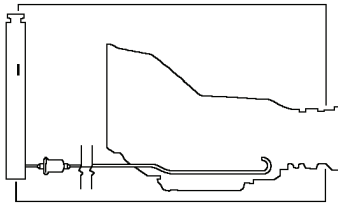

***UTILISEZ LA BONNE HUILE - VÉRIFIEZ LE GUIDE DU PROPRIÉTAIRE POUR OBTENIR LE TYPE D'HUILE PRÉCIS.**

Filtere de conduite magnétique pour transmission 58953 (7/16 po)/58964 (5/16 po)

Le filtre de conduite auxiliaire WIX est conçu spécifiquement pour enlever les impuretés communément trouvées dans l'huile des transmissions automatiques.

L'huile contaminée des transmissions peut causer une panne prématurée dans la transmission. Le filtre de conduite magnétique WIX extrait les particules ferreuses et non-ferreuses de l'huile, offrant une protection supplémentaire abordable des systèmes hydrauliques et de lubrification.

Ce filtre auxiliaire WIX est caractérisé par une filtration plein débit à double action. Un aimant de plastique puissant attire et retient des matières d'usure ferreuses, suspendues dans l'huile en circulation. Il travaille de concert avec un élément en papier robuste, renforcé par un manchon d'acier qui capte les impuretés restantes non-ferreuses, même si elles sont de 25 microns seulement. Si l'élément de papier s'encrasse d'impuretés, une soupape de sûreté assure un débit continu de l'huile, alors que l'aimant continue de récupérer les particules métalliques.

Le filtre de conduite auxiliaire est étudié tel qu'il résiste aux conditions extrêmes des transmissions automatiques.

Le filtre de conduite magnétique WIX est construit afin de demeurer performant dans les milieux les plus difficiles; sous la chaleur du désert comme dans le froid polaire; sous une pression uniforme allant jusqu'à 200 lb/po² et sous des surpressions pouvant draguer les impuretés. Il est également fabriqué pour supporter les impacts soudains et les vibrations fortes qui surviennent même lors de la conduite normale.

58953 (7/16 po)/58964 (5/16 po)

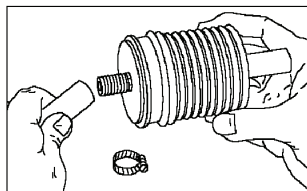

◆ Les filtres de conduite pour transmission WIX s'installent en quelques instants sur la canalisation de refroidissement de la transmission

Le filtre de conduite auxiliaire pour transmission conçu spécialement pour les transmissions automatiques d'aujourd'hui.

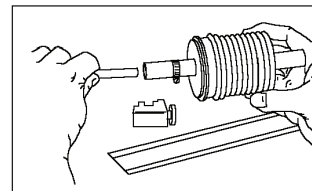

Efficace: Lors d'essai indépendant, le filtre de conduite magnétique WIX enleva plus de 95% de toutes les impuretés métalliques introduites dans l'huile de transmission.

Durable: Il continue d'enlever les impuretés même dans les conditions les plus difficiles, et pour des températures atteignant jusqu'à 350° F. Grâce à sa construction robuste, le filtre de conduite peut résister à des pressions continues pouvant atteindre jusqu'à 200 lb/po² ainsi qu'à des à-coups intermittents de pression encore plus élevée. Il est d'ailleurs résistant aux secousses et aux vibrations.

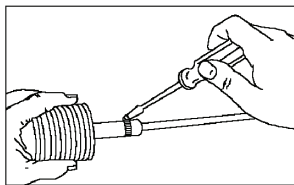

Facile à installer: Le filtre de conduite auxiliaire magnétique WIX peut être installé en moins de dix minutes... et se remplace en moins de cinq. Voici

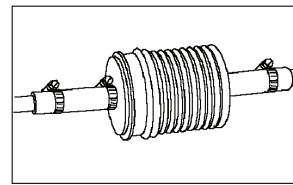

1. Introduisez des morceaux de tuyaux flexibles convenables aux raccords du filtre et fixez fermement.

2. Introduisez les extrémités des tuyaux aux deux bouts de la ligne de refroidissement une fois celle-ci coupée, en prenant soin de situer le filtre dans le sens du débit de l'huile comme il est indiqué par la flèche sur le filtre.

3. Fixez toutes les brides de serrage sur la ligne de refroidissement.

4. Et voilà, c'est terminé.

Un parfait produit d'entretien préventif de WIX.

Consejos útiles para la instalación de los filtros de la transmisión

1 NO REQUIERE HERRAMIENTAS

ESPECIALES. Estas son las herramientas simples requeridas para realizar la mayoría de los reemplazos comunes: • Llave acodada • Llave de tubo de 1/2" • Destornillador • Llave de boca fija abierta de 7/16". Ninguna pieza componente mecánica o hidráulica en la transmisión es perturbada durante el cambio. El filtro es simplemente quitado con un destornillador en sólo unos pocos segundos, y es reemplazado en el mismo tiempo breve.

2 POSICIONE LA BANDEJA DE LA TRANSMISIÓN, DRENE EL FLUIDO, QUITE LOS PERNOS Y DEJE CAER LA BANDEJA.

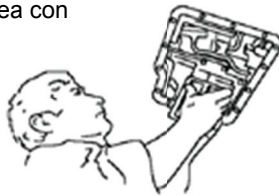

Comience a quitar los pernos en una esquina, alternando de un lado al otro, dejando que la bandeja se incline gradualmente hacia abajo en una dirección para facilitar el drenaje.

3 QUITE LA VIEJA JUNTA RASPÁNDOLA Y LIMPIE LA BANDEJA y la caja. Limpie la bandeja por dentro y por fuera. Enderece la bandeja alrededor de los agujeros de los pernos.

4 QUITE EL FILTRO VIEJO. Los filtros son soportados en su lugar ya sea con pernos o tornillos, o simplemente de deslizan hacia adentro y hacia afuera.

5 POSICIONE EL NUEVO FILTRO Y VUELVA A COLOCAR LOS TORNILLOS. Todo lo que usted necesita para reemplazar el filtro está incluido en el juego del filtro: filtro, junta de la bandeja y junta tórica (cuando es requerida).

6 INSTALE LA NUEVA JUNTA.

Despliegue la junta y colóquela encima de la superficie de la lámina metálica limpia y seca. **NO USE SELLADORES ADHESIVOS.** Alinee la junta GRIPPERMC con la lámina metálica. Luego, pase el perno a través de dicha lámina y continúe presionando el perno a través del material de la junta que tiene agujeros apenas más pequeños para los pernos. Este procedimiento retendrá a la junta contra la bandeja metálica. Repita este procedimiento hasta que todos los pernos estén colocados. Limpie con un paño el exceso de aceite del reborde de la transmisión. Evite la acumulación de aceite sobre la junta de la bandeja en el momento del ensamblaje. Coloque la unidad de la junta de la bandeja de transmisión alineada con la caja de transmisión e instale los pernos.

GASKET = JUNTA STEEL METAL = LÁMINA DE ACERO

7 COLOQUE LA BANDEJA CONTRA LA CAJA Y VUELVA A COLOCAR LOS PERNOS.

- Ajuste a mano o use herramientas eléctricas con la capacidad de ajuste del torque apropiado.
- Ajuste los pernos. Comience en el centro de la bandeja; luego continúe en el lado opuesto, cruzando y trabajando hacia el extremo exterior de la bandeja.
- Ajuste hasta 9 N.m (80 pulg-libra) usando la misma secuencia (basado en un ajustador (NC) 5/16-18)
- Luego aplique un torque final de 13,5 N.m (120 pulg-libra), repitiendo la secuencia de ajuste de los pernos.

8* RELLENE LA TRANSMISIÓN.

Baje el vehículo. Quite la varilla medidora del aceite del tubo de llenado del mismo, agregue fluido para transmisión tal como lo recomienda el fabricante del vehículo.

Emplee el freno de mano, arranque el motor con el vehículo detenido, **NO ACELERE EL MOTOR.** Mueva la palanca de control por cada posición. Examine inmediatamente el nivel del fluido con la palanca en la selección "park" (detenido), el motor en marcha y el vehículo sobre una superficie nivelada. Agregue fluido adicional para llevar el nivel a 6,35 mm (1/4") por debajo de la marca "add" (agregar) en la varilla medidora.

NOTA: NO LLENE EN EXCESO.

***USE EL MANUAL DEL DUEÑO PARA EXAMINAR CORRECTAMENTE EL FLUIDO.**

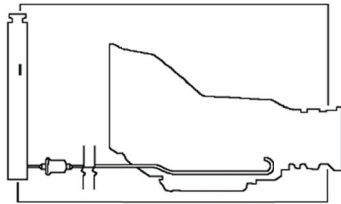

Filtro de la transmisión en línea magnético

58953 11,11 mm (7/16") / 58964 7,93 mm (5/16")

El filtro en línea auxiliar de WIX está específicamente diseñado para eliminar contaminantes comúnmente hallados en los fluidos de la transmisión automática.

El fluido de la transmisión contaminado puede causar fallas prematuras en la transmisión. El filtro de la transmisión en línea magnético WIX extrae tanto partículas ferrosas como no ferrosas del fluido de la transmisión, brindando protección adicional a los sistemas hidráulico y de lubricación, a bajo costo.

El filtro auxiliar WIX presenta una filtración de doble acción y flujo total. Un imán plástico potente atrae y contiene material de desgaste ferroso suspendido en el flujo de fluido que pasa. Funciona conjuntamente con un elemento de papel firme, reforzado por una manga de acero que atrapa los contaminantes no ferrosos remanentes tan pequeños como de 25 micrones. Si el elemento de papel se atasca con contaminantes, una válvula de alivio de presión asegura un flujo de fluido continuo, mientras el imán continúa filtrando las partículas metálicas del fluido.

El filtro en línea auxiliar está fabricado para soportar las condiciones extremas a las que una transmisión automática pueda estar sometida.

Este filtro WIX está fabricado para rendir en los ambientes más rigurosos. Realizan su función en el calor del desierto tan bien como en el frío polar. También soportan presiones constantes de hasta 1378,9 kPa (200 psi), así como los aumentos súbitos de presión que pueden dragar contaminantes. Además, está fabricado para controlar los impactos repentinos y las vibraciones severas que hasta las condiciones normales de manejo pueden proporcionar.

58963 11,11 mm (7/16") / 58964 7,93 mm (5/16")

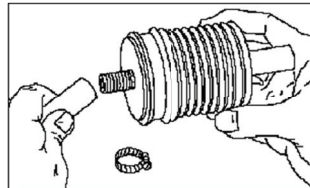

- ◆ El filtro de la transmisión en línea WIX requiere solamente unos minutos para ser colocado en la línea de refrigeración de la transmisión.

El filtro de la transmisión auxiliar en línea está especialmente diseñado para las transmisiones automáticas actuales.

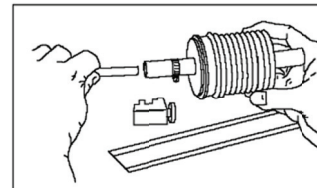

Eficiente: En pruebas independientes, este filtro en línea magnético WIX eliminó más de un 95% de todas las impurezas metálicas introducidas en el fluido de la transmisión.

Durable: Continúa filtrando contaminantes hasta bajo las condiciones más rigurosas. En temperaturas de hasta 176°C (350°F), la construcción resistente del filtro en línea puede soportar presiones constantes de hasta 1378,9 kPa (200 psi) y aumentos súbitos, intermitentes y cortos, de presión aún más alta. También es resistente a los impactos y a las vibraciones.

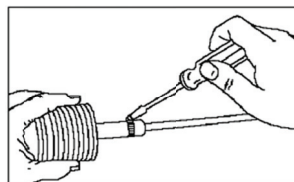

Fácil de instalar: El filtro de transmisión auxiliar en línea magnético WIX puede ser instalado en menos de diez minutos ... y reemplazado en menos de cinco. Aquí le mostramos cómo hacerlo:

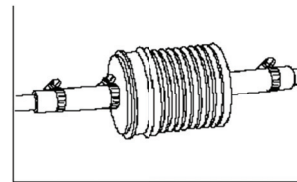

1. Inserte longitudes cortas de manguera apropiada sobre los acoplamientos del filtro y abraze firmemente.

2. Inserte los extremos de manguera sobre el extremo del hueco cortado dentro de la línea de refrigeración cuidando ver que el filtro esté correctamente orientado con el flujo del fluido, tal como lo indica la flecha de flujo sobre el filtro.

3. Asegure todas las abrazaderas sobre la línea de refrigeración.

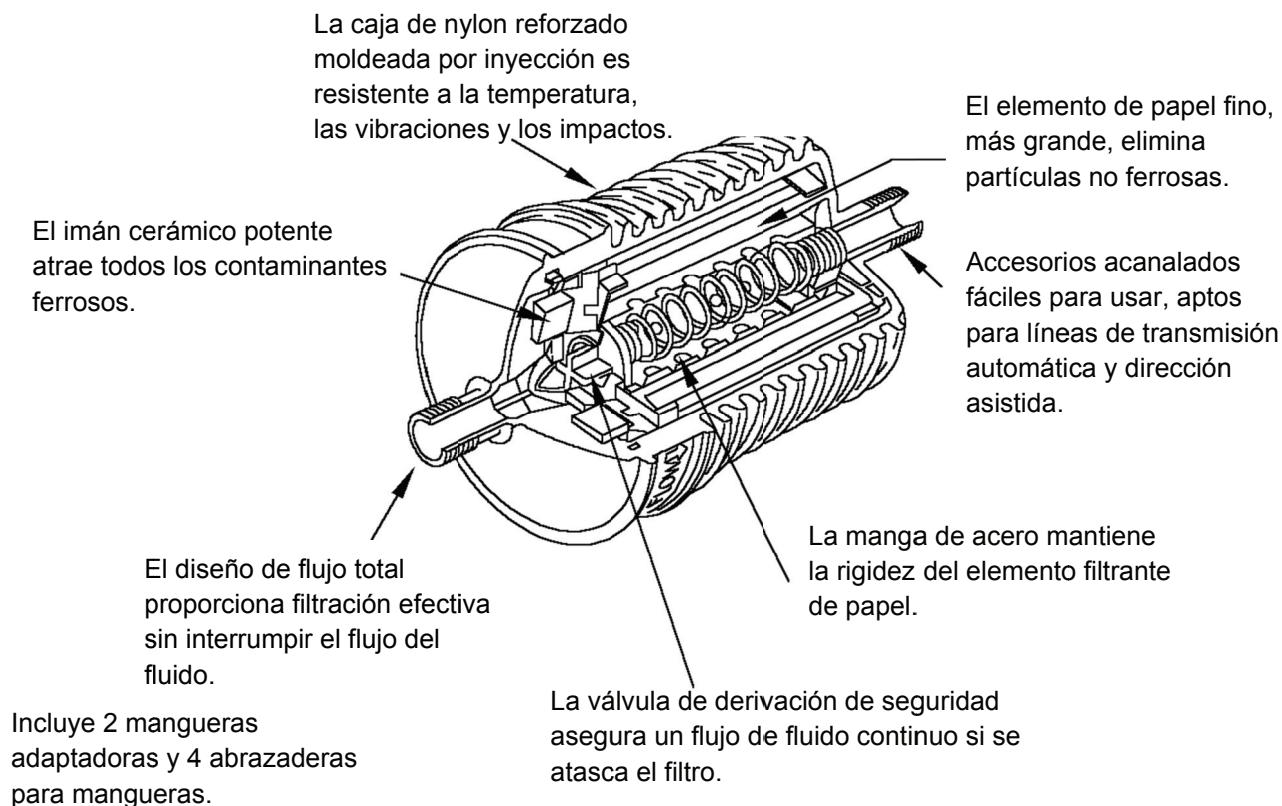

4. Y ... usted ya terminó.

Es el producto de mantenimiento preventivo perfecto, y está fabricado por WIX.

Filtro de la transmisión en línea universal (Puede ser usado también en la transmisión asistida.)

Nota: En vehículos que no hayan experimentado fallas en la transmisión, instale dentro de la línea de entrada del refrigerador para proteger el refrigerador y la transmisión contra los contaminantes. Después de una puesta a punto, instale dentro de la línea de retorno del refrigerador para atrapar contaminantes que puedan permanecer en dicho refrigerador.

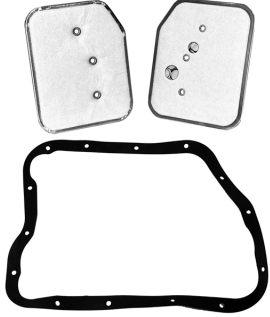

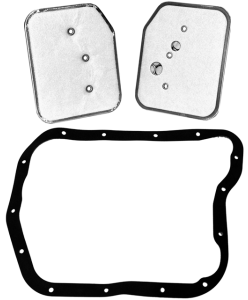

Advertencia: Cuando es usado en dirección asistida, instale solamente en el lado de retorno (lado de presión baja).

WIX Racing Oil Filters

WIX provides two very different and distinct racing filters – **Advanced Performance Filters (T-10)** and **High Efficiency Endurance Filters (T-71)**.

Advanced Performance Oil Filters use a media (T-10) that is rated at a Frazier air flow of approximately 267 CFM and is wire-backed. The unique wire-backing provides a very stable base for a media blend of fiberglass, polyester and cellulose. This media is resistant to high temperatures and water levels in the oil that can plug standard media types. Our **Advanced Performance media (T-10)** is designed to provide a positive oil flow with low restriction (*see chart, next page*).

WIX Advanced Performance (T-10) Oil Filter Part Numbers are:

***51268**

57003R*

57007R*

**Remote Mount Adapters Are Required (see pages 7 & 9).*

Additional Oil Filter Features Include:

- A. Heavy-walled can and cover to withstand the extreme burst pressures (up to 500 psi).
- B. High temperature nitrile components (up to 300°F)...Anti-drainback valve (when included) and base plate gaskets to withstand extremely high racing temperatures.
- C. Zinc chromate plated base plate...Low surface friction and corrosion-free.
- D. Spiral wound center tube provides increased collapse pressure and enhanced flow pattern.
- E. Metal end caps provide element strength and prevent filtering bypass.
- F. Individually sealed to protect against contamination by environmental dust or dirt.

These are the WIX recommended oil filters for maximum horsepower increase, to be used primarily on concrete or asphalt tracks.

**For optimum performance, use our
Advanced Performance Oil Filters with our
Advanced Performance Air Filters.**

WIX Racing Oil Filters

High Efficiency Endurance Oil Filters use a media (**T-71**) rated at a Frazier air flow of approximately 75 CFR. This media contains a higher resin content than our **Advanced Performance Filters** to trap and hold smaller contaminants and provide higher efficiency.

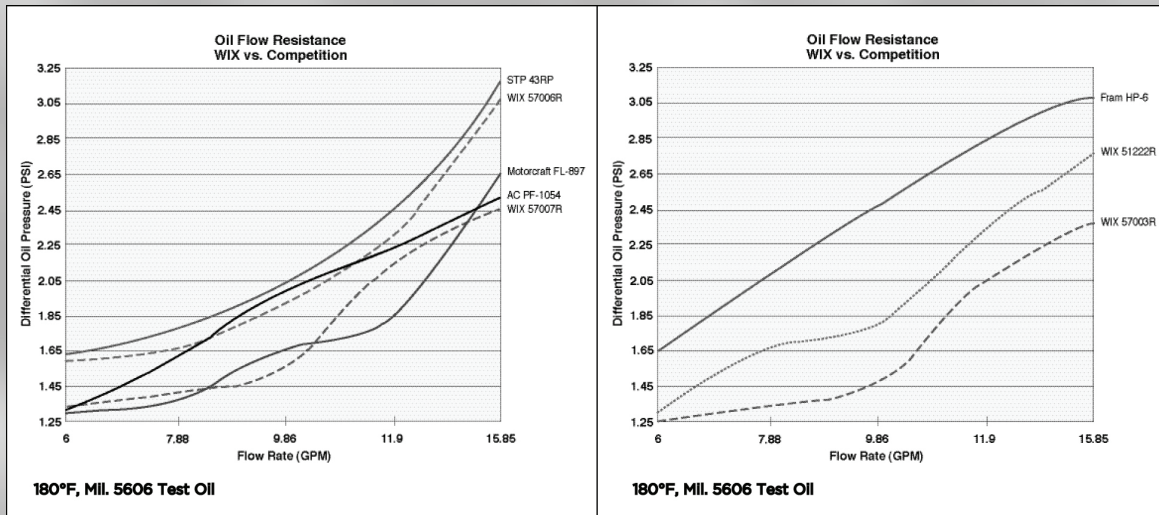

Our **High Efficiency Endurance Filters** also include the same component features as the **Advanced Performance Filters**: high burst pressure can, high temperature rubber components, zinc chromate base plate, metal end caps and spiral center tubes.

WIX High Efficiency Endurance (T-71) Oil Filter Part Numbers are:

51060R 51061R 51069R 51222R 51515R 51794R

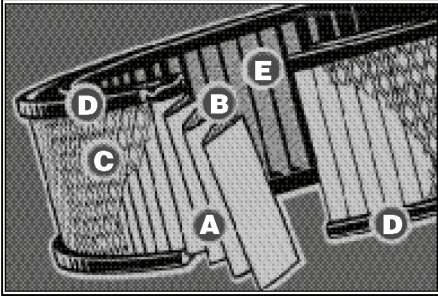

These are the WIX recommended oil filters for better efficiency needed on dirt, clay or off-road tracks.

For better protection, use our High Efficiency Endurance Oil Filters with our High Efficiency Endurance Air Filters.

CAUTION: Not intended for street use.

WIX Racing Air Filters

Advanced Performance Air Filters use a unique patent-pending design. Our wire-backed gauze **Reemay®** media (**T-66**) allows maximum air flow while minimizing restriction to boost horsepower. With a Frazier air flow of approximately 410 CFM, these air filters have the lowest restriction of any racing filter available (*see chart, next page*).

WIX Advanced Performance (T-66) Air Filter Part Numbers are:

46940R	46944R	46945R	46948R	46949R
46941R	46928R	46974R	46927R	46926R

Additional Air Filter Features Include:

- A. High performance media is designed to provide increased air flow.
- B. Wire mesh gauze media support (when included) contributes to rigid filter construction by assuring consistently stable pleats at high air flow volumes.
- C. Outer screen of expanded metal protects the filter media and supports the filter assembly.
- D. Molded plastisol top and bottom assures a positive seal between the filter and the air intake housing.
- E. Inner screen of epoxy-coated steel wire withstands corrosion and insures stability of the filter element.

These are the WIX recommended air filters for *maximum horsepower increase* used primarily on concrete or asphalt tracks of Nextel Cup, Busch, SuperTruck or ARCA.

**For optimum performance, use our
Advanced Performance Air Filters with our
Advanced Performance Oil Filters.**

WIX Racing Air Filters

High Efficiency Endurance Air Filters use a media (**T-88**) specifically developed to filter out harmful contaminants while providing low restriction. With a Frazier air flow of approximately 73 CFM, this is an ideal air filter for the Late Model, Sportsman and Modified racers who run primarily on dirt tracks.

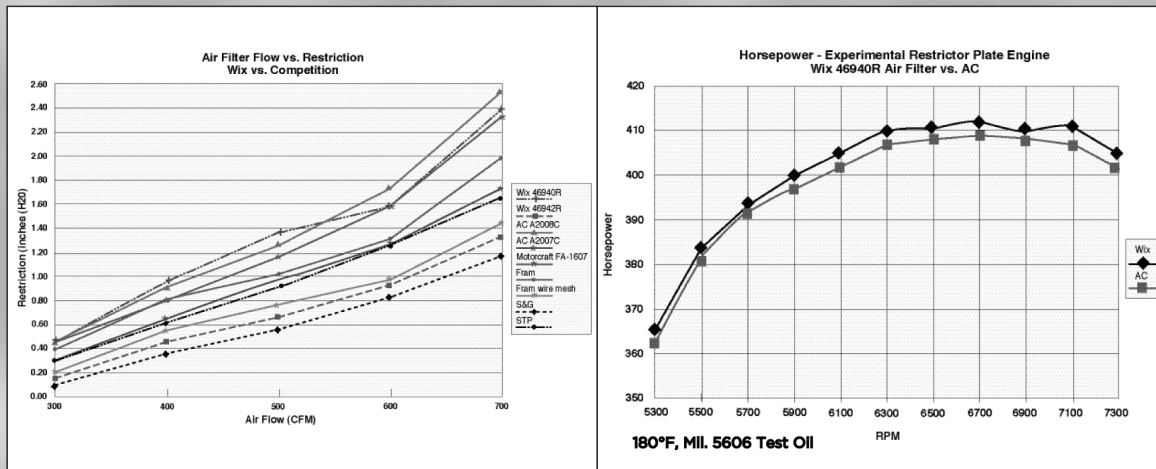

Our **High Efficiency Endurance Air Filters** also share the same exclusive component features as the **Advanced Performance Air Filters**.

WIX High Efficiency Endurance (T-88) Air Filter Part Numbers are:

42095R 42096R 46946R

These are the WIX recommended air filters for better efficiency needed on dirt, clay or off-road tracks.

For better protection, use our High Efficiency Endurance Air Filters with our High Efficiency Endurance Oil Filters.

CAUTION: Not intended for street use.

WIX Racing Oil and Air Filter Specifications

Oil Filters

Filter Number	Thread Size	Filter Height	Filter OD	Media Type	Flow Rate GPM	Bypass Valve Setting*	Anit-Drain Back Valve
51060R	13/16-16	5.17	3.6	T-71	28	None	Yes
51061R	13/16-16	5.17	3.6	T-71	28	None	No

CAUTION: Racing performance parts are sold "as is" without any warranty. There is not implied warranty for fitness or merchantability. The buyer assumes all risks related to the use of this product. New vehicle and equipment warranties are voided when this product is used in competitive racing or modified high performance engines.

Technical Service Bulletin

Over-Pressurized Lube Oil Filters

From time to time every filter manufacturer has had a filter that has been severely over-pressurized returned from a customer. Often the deformed filter is the only sign the car owner has that a problem existed in their lube oil system.

It's possible that the damaged filter was not noticed until it was removed during the next scheduled oil change. However, if the pressure was sufficient to blow out the gasket or unroll the lockseam, the car owner may have experienced immediate and costly problems.

With the "evidence" in their hands, they tend to put the blame on the damaged filter. It's not surprising that they are more than a little aggravated when the filter manufacturer denies any responsibility for the damage. What, then, has caused the over-pressurization?

A look at how a lube oil system functions will show that oil pressure is created by the oil pump. The upper limit of this pressure is controlled by a pressure regulating valve, which is usually an integral part of the pump.

Figure 1 is a simplified diagram of the lube oil system showing the pump, regulating valve, filter and bearings.

The pump supplies sufficient flow to lubricate the bearings and other moving parts of the engine. This oil must be under pressure if it is to properly separate the highly loaded parts of an engine and prevent excessive wear. The purpose of the regulating valve is to provide this pressure, which on most passenger cars is between 40 PSI (280kPa) and 60 PSI (410kPa).

The regulating valve is made up of a ball or plunger, which regulates pressure with the aid of a spring. The spring is calibrated so that the plunger will lift off its seat when the oil pressure reaches the desired amount. Once the valve is open, the pressure remains fairly constant with only small changes occurring as the engine speed varies.

The filter and all other components in the lube system are subjected to the pressure established by the regulating valve. If this pressure is excessive, filter damage may occur. This is the point that many people who are not familiar with lube systems fail to realize.

What can cause the pressure in the system to exceed the regulating valve setting? The answer is that either the valve must be stuck in the closed position or it is sluggish and slow to move to the open position after the engine has started.

Figure 2 shows the system operating with the regulating valve stuck in the shut position. Under these conditions the pressure builds up equally on all components in the system until something happens to relieve the pressure. If the regulating valve becomes unstuck, the pressure will return to normal.

Normal operating pressure causes no permanent deformation of the filter body. When the system pressure reaches 150 PSI (1,000 kPa) due to a faulty regulating valve, most filters become permanently deformed. At this pressure, the gasket usually will not blow out and the lockseam will remain sound.

If the regulating valve still remains stuck, the pressure will increase further and the gasket between the filter and the base can be blown out. This will probably cause the loss of all the oil in the system.

If the filter has been installed on the tight side, the gasket may not blow out and the lockseam will unwind as the pressure continues to rise.

The main point is that the deformed filter is not the cause of this excessive pressure, but the victim of a faulty regulating valve.

If the customer is alert and shuts the engine off at the first sign of trouble (red light on or reduced oil pressure), they can limit their loss to a tow job, oil change and new filter. If the vehicle continues to be driven, engine failure is probable.

The customer may ask if a plugged filter could have caused the over-pressurized condition. The answer is no; if the regulating valve is functioning properly, it will maintain the pressure on the filter at 40 PSI (280 kPa) or 60 PSI (410 kPa) even if the filter is plugged.

In summary, if a lube filter distorts due to excessive pressure in the system, the fault lies with the oil pump pressure regulating valve and not with the filter.
